

Heir Onboarding Simulation

Validate that heirs can recover funds with minimal prior technical knowledge and without original operators.

- Sealed instruction packets and diagrams.
- Dedicated test wallet with non-trivial balance for realism.
- Supervised environment with observer notes.

- 1) Open sealed instructions; verify identity of facilitators.
- 2) Walk through recovery on hardware; confirm addresses and balances.
- 3) Execute a small spend; verify PSBT signing steps.
- 4) Capture blockers and confusion points; update materials.
- 5) Reseal updated instruction packet and log the drill.

- Do not disclose production seeds during training; use a test wallet.
- Keep heirs' PII minimal and secure.
- Watch for social dynamics—pressure or overconfidence can hide gaps.

- **Nunchuk** for structured workflows
- **Coldcard** for deterministic, verifiable recovery
- Printed diagrams with minimal sensitive data

Annual exercise; rotate facilitators; verify heirs' contact info and readiness.
